Version	Date	Comments
1.0	26 <sup>th</sup> October 2017	Initial draft
1.1	31 <sup>st</sup> October 2017	Updated

## Document Content

---

### *Content outline*

This document contains the primary changes and installation notes for release KxParcels 2017.0.

### *Confidentiality*

This document strictly confidential and is intended solely for the use by the client organisation. No distribution or reproduction of this document is permitted without the written permission of Kinetic Solutions Limited.

## Pre- Requisites

---

### Client Machines

- Windows 8.1 and above.

### Servers

- Windows Server 2012 and above.

### Microsoft SQL Server Versions

- SQL Server 2014 (Service Pack 2) and above.

### Web Servers – hosting Kx web applications

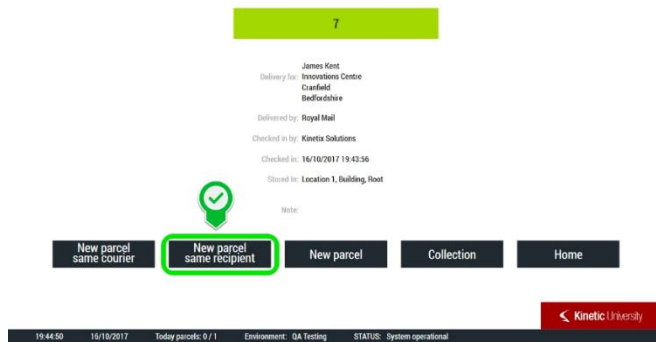

- Internet Information Services 8.0 and above.

All web servers must have a minimum of Microsoft .Net 4.6.1 extensions installed.

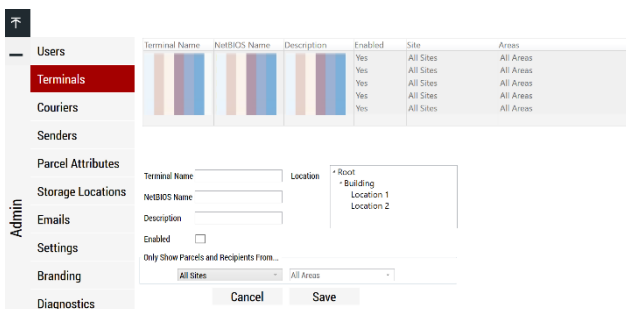

# New Features/Functionality

## New Parcel Same Recipient

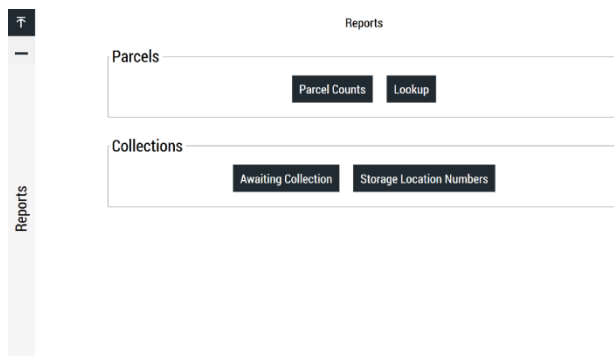

To assist with making the delivery process more efficient, KxParcels 2017 now provides the option of 'New parcel, same recipient'. Once a user has completed a parcel delivery, they will then be able to add a secondary parcel to that recipient without having to fill in that recipient's information again. This was one of the most sought out features that our users asked us for.

## Filtering by site and Area

KxParcels 2017 introduces functionality that allows terminals to be attached to specific sites and areas. KxParcels is now able to pick up on recipient's site and area details, returning only those students applicable to the terminals site and area. This increases the efficiency of both the collection and delivery processes.

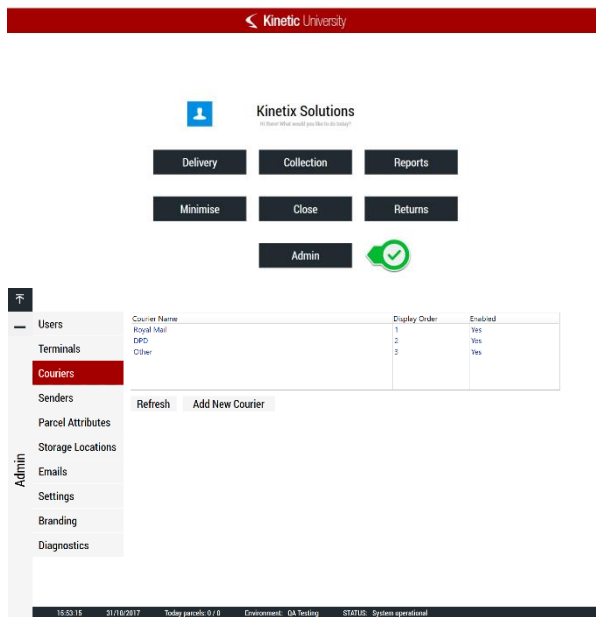

## Reporting suite

KxParcels 2017 has an integrated reporting suite which provides key statistics, such as parcel counts, storage location numbers and parcels awaiting collection. The reporting suite has been introduced to allow for better control of the whole parcel operation and better management of services. This page will only be accessible by users who have been given the relevant access.

### Integrated Configuration

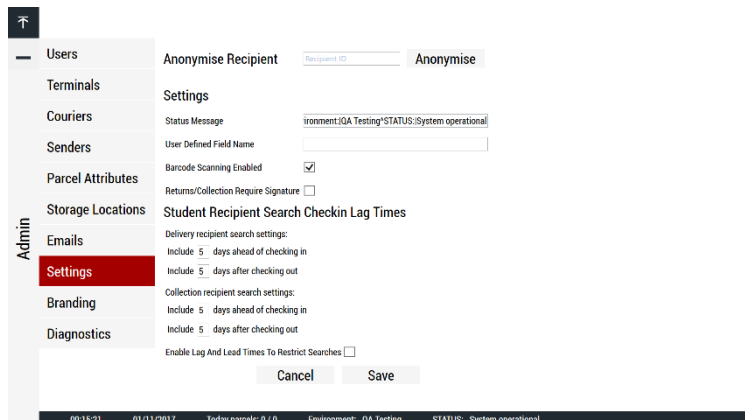

Another substantial change within KxParcels 2017 is that we have now integrated the administrative area into the main application. This eliminates the need for two separate applications. User level functionality has still been kept and the system administrator will still be able to configure which users get to see the admin area and the reports area.

### Diagnostics Area

A brand-new diagnostics area within administrative area has now been added. This functionality will be key to helping with debugging for both administrators and the KxSupport team therefore enabling faster resolutions and higher uptimes.

### Anonymise Recipient

In order to comply with new GDPR legislation we have added an anonymisation feature to KxParcels which will enable users with the given permission to anonymise the records of given students. Users will however not be able to anonymise students that have outstanding parcels to collect.

## Changes/Improvements

---

- Primary brand colour added to identify tabs.
- Pre-selected locations in terminals now get highlighted.
- Parcel groups now get shown in collection & Return process.
- Updated error messages throughout the application for easier debugging.
- Increased size of grids for better use of real estate within the application.
- UI changes so that all screens are consistent and aligned throughout the application.
- Enhanced reporting.
- Date pickers have been updated and made bigger for easier usability.
- Consistent fonts and sizes throughout application.
- Improvements made to the HTML email editor.
- Fixed a bug with the display of storage locations.
- Fixed keyboard display issues.
- Ability to remove images through the admin client.
- Changed date/time format to the standard DD/MM/YYYY.
- Performance improvements.
- Added aiding hints throughout parts of the application for better clarification.
- Added password masking for improved security.
