# Outline

## ***Document Content***

---

### **Content outline**

This document contains the primary changes and installation notes for release 2015.1 of KxRegistration.

This document is intended for reference against existing installations of KxRegistration (2015.0). Earlier changes can be found in previous release notes documents.

### **Confidentiality**

This document strictly confidential and is intended solely for the use by the client organisation. No distribution or reproduction of this document is permitted without the written permission of Kinetic Solutions Limited.

## ***Important information for migrating from KxRegistration 2014 to KxRegistration 2015***

---

---

*KxRegistration 2015 has been upgraded to utilise .NET 4.6.1. Prior to deployment, please ensure .NET 4.6.1 is installed on the webserver. This can be downloaded from the following URL: <https://www.microsoft.com/en-gb/download/details.aspx?id=49981>*

---

---

*Please refer to the deployment notes at the end of this document, and note that the **App\_Themes** folder should also be deleted.*

---

## Outline

### ***New feature/functionality highlights***

---

- None

For full list of new features view the version highlights link in the admin section:

A screenshot of a license key box. The text inside the box is "KxRegistration v2013.0 (13/02/13 23:35) Licensed to KxDemo, expires 25 January 2014". The text is in a small, blue font. The box has a white background and a thin blue border.

KxRegistration v2013.0 (13/02/13 23:35) Licensed to KxDemo, expires 25 January 2014

### ***Changes/improvements/fixes***

---

- Update to DevExpress 2015.2.11 following security alert from DevExpress
- Attendee data export formatting to WYSIWYG rather than Excel grouped data

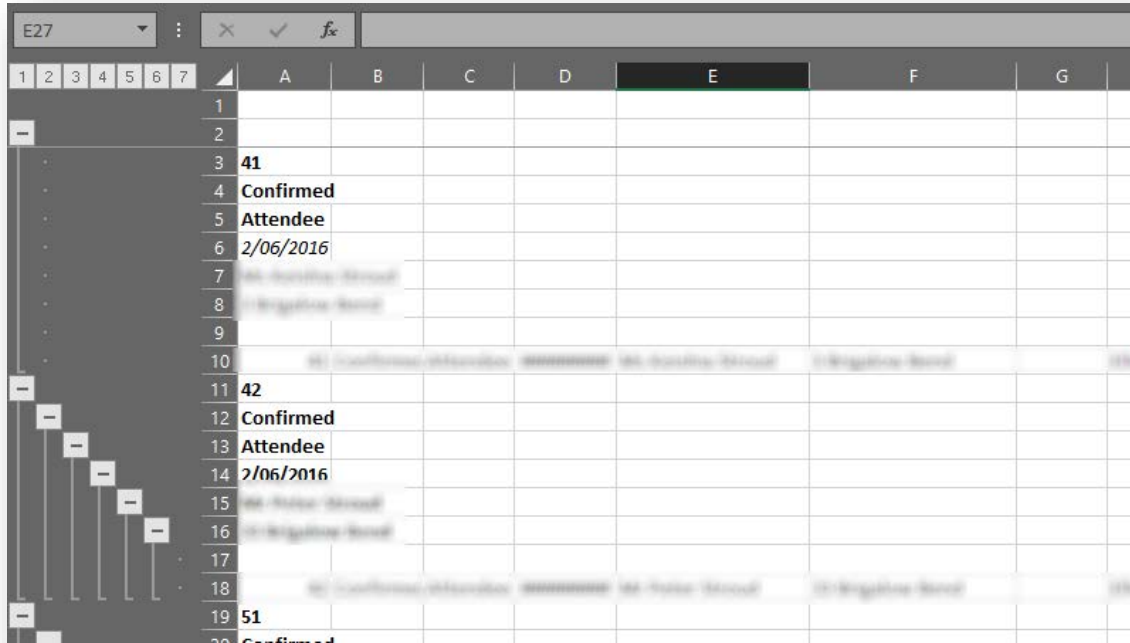

# Changes improvements and fixes

## Update to DevExpress 2015.2.11 following security alert from DevExpress

Following a security alert from DevExpress, the component suite used for the admin section of KxRegistration has been updated to the latest version.

## Attendee data export formatting to WYSIWYG rather than Excel grouped data

When exporting the attendee data to Excel using the Data Export option, the grouped data appeared as groups within Excel:

Export now appears as it did in previous versions:

Attendee #	Status	Type	Registered	FullName	Address 1	Address 2	Town	Postcode/Zip code	County	Address 1	Address 2	Town	County	Postcode/Zip code	Delegate Package
4013	Pending	Default	26/02/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	2 day / 2 night
4014	Pending	Default	26/02/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4026	Confirmed	Default	26/02/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4027	Confirmed	Default	26/02/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4030	Confirmed	Default	26/02/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4038	Confirmed	Default	31/03/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4039	Confirmed	Default	31/03/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4040	Confirmed	Default	31/03/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	
4041	Confirmed	Default	31/03/2014	ign ign ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	ign	

## Deployment of the upgrade

### Database

The following steps should be carried out when upgrading the database:

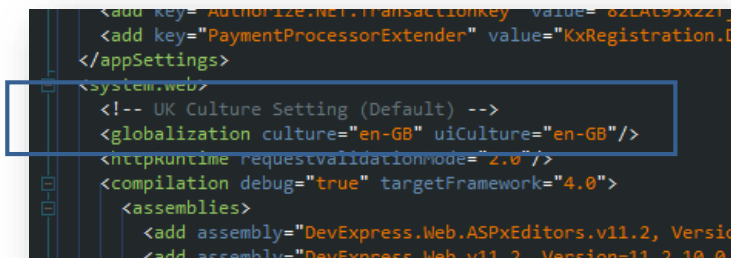

1. Backup the existing database
2. Open and the KxRegistration DB Installation 2015.1 script
3. Perform a Find and Replace on this file replacing DBNAME with the name of the linked Kx database, e.g. Kx\_Live, GERM etc.

### Website

The following steps should be carried out when upgrading the website:

1. Backup the existing website
2. Delete the \bin\ folder
3. Delete the \App\_Themes\ folder
4. Deploy the Website folder from the deployment package.
5. Retrieve the existing Connection String/globalization settings from the backup of the web.config file into the clipboard
6. Open the new Web.config and paste the connection string, replacing the current one in the file.
7. Ensure that any existing settings are copied back in place:
  - a. PaymentProcessorExtender
  - b. Authorize.NET.TransactionKey
  - c. HMACSHA256.Key
  - d. ICalGenerator
  - e. IConvertHtmlToPDFFile
  - f. IAuditExtraInfoProvider
  - g. Auditor
  - h. StopCachingUser
  - i. CacheSeconds

For US sites, the web.config should also be edited to use the en-US culture settings to ensure that the US date and currency formats are used:

```
<add key="Authorize.NET.TransactionKey" value="62EAC95X22TJ" />
<add key="PaymentProcessorExtender" value="KxRegistration.D" />
</appSettings>
<system.web>
  <!-- UK Culture Setting (Default) -->
  <globalization culture="en-GB" uiCulture="en-GB" />
  <httpRuntime requestValidationMode="2.0" />
  <compilation debug="true" targetFramework="4.0">
    <assemblies>
      <add assembly="DevExpress.Web.ASPxEditors.v11.2, Version=11.2.10.0" />
      <add assembly="DevExpress.Web.v11.2, Version=11.2.10.0" />
    </assemblies>
  </compilation>
</system.web>
```
